Homework 7

1. Command pipeline:

```
[root@localhost ~]# find / -type f -not -path "*sys/*" -not -path "*proc/*" -not -path "*dev/*" | shuf -n 1 | nc 192.168.1.1 5005
```

2. No muddy topics from this homework reading.
3. Use iptables to open a range of ports (useful if you want to open more than a single port):

```
[root@localhost ~]# iptables -A INPUT -m state --state NEW -m tcp -p tcp --dport 7000:7010 -j ACCEPT
```
